

Integer Closure: The Self-Referential Structure of {3, 4, 7, 13}

$j = (N_{base} \times N_c)^3 = (4 \times 3)^3 = 1728$
(CM curve invariant)

Framework Integers

$N_c = 3$ (floor of x_-)
 $N_{base} = 4$ (Lucas L_3 , only perfect square)
 $b_3 = 7$ (Tribonacci T_6)
 $N_{eff} = 13$ (unique $F_7 = T_7$ crossover)
